Aegis Development, Inc.

Corporate Profile

Aegis produced the first flight simulator for the Macintosh with Mac-Challenger, a space shuttle landing sequencer. Pyramid of Peril™ was the first 3D graphic adventure game sold for the Macintosh. Doug Clapp's Word Tools™ provides the Desktop Publisher and author with remarkable style and punctuation analysis.

Aegis introduced the first Computer Aided Design system for the Commodore Amiga. A year later, Aegis Draw™ and Aegis Draw Plus™ remain the best selling CAD systems for the Amiga. Aegis Animator™ was voted Animation Product of the Year by the country's largest and most respected Amiga Users Society and by the Judges at the Consumer Electronics Show in Chicago.

With the recent release of Animator/ST™, Aegis has brought full featured cel/metamorphic animation to the ST line of computers. With many additional titles slated for 1987 release, the ST will receive significant support from Aegis during the coming years.

Aegis is always exploring new systems and technologies for product development. In 1987, Aegis CD-I will release developmental tools and software titles for the new Compact Disk Interactive system developed jointly by Sony™ and Phillips™. Apple computer will release new hardware and Aegis will be right there with software products for both the Apple IIgs™ and Macintosh families.

Hardware Supported

Apple Macintosh family
Apple IIgs (Spring 1987)
Commodore Amiga family
Atari ST 520, ST 1040
Compact Disk Interactive (Fall 1987)

Development Environment

Marketing

Aegis Development markets its products via national distribution outlets and dealers. The company also maintains an aggressive internal sales force and Aegis representatives spend much of their time on the road, visiting distributors, dealers, and user groups. Aegis products are advertised around the world in nationally recognized trade publications. The marketing group also attends an average of 18 trade show events every year.
